WE CREATE SPACE

For nearly 30 years, we have been designing and building modern trade fair stands for companies in Poland and abroad.

As a family-owned company with an established market position, we offer comprehensive support for trade fair participation – from concept and design, through production, to logistics and consulting.

We specialize in both modular (system) and custom-built stands, tailored to the brand's character, business objectives, and the Client's budget.

We create functional and visually appealing spaces that attract attention, support sales, and facilitate building relationships with visitors. We help exhibitors effectively present their offer and stand out from the competition.

EXPERIENCE. EXPERTISE. TRUST.

this is what we stand for

- › **30** years of experience
- › Over **1,000** stands delivered
- › **100+** stands each year
- › Over **300** loyal Clients
- › **Top** trade fairs in Europe

PORTFOLIO

PROJECTS

The design process for a trade fair stand begins with an analysis of the Client's needs, business objectives, and the specifics of the event. Based on this, we develop a spatial concept that combines functionality, aesthetics, and alignment with the brand's visual identity.

The technical design includes, among other things, the layout of zones, selection of materials, graphics, and structural elements – taking into account the organizer's requirements and assembly logistics. We use modern 3D tools, allowing the client to see how the final stand will look at every stage of the process.

The entire design is created with ease of use, transport, and future adaptability in mind.

BRIEF
form

MANUFACTURING & ASSEMBLY

All stand elements are produced in our in-house workshop – from supporting structures, wall panels, floors, and furniture, to graphics, lighting, and finishing details. We use high-quality materials such as wood, MDF, steel, glass, and plastics, selected individually to suit the project's character and installation conditions.

Each component is precisely prepared, enabling fast and safe assembly on-site – both in Poland and abroad. Our technical teams are experienced, well-coordinated, and ready to operate even in the most demanding trade fair conditions.

By maintaining full control over production and logistics, we ensure high quality and timely delivery.

SCALE

We design and build both large, prestigious stands and compact spaces that undoubtedly require clever and well-thought-out solutions. Regardless of size, we always seek forms that capture attention and support the client's objectives. We love challenges. We can create grand, striking, multi-level constructions, but we also make the most of every square centimeter in smaller spaces.

We impress with unconventional designs and meticulous attention to detail – from concept to execution. Our projects combine aesthetics with functionality, making them successful both in premium projects and those with strictly defined budgets.

SCALE

BRANDING

Branding on a stand is primarily about a coordinated display of visual identity – from colors and carefully placed logos to large-format graphics and messages that must be clearly visible and consistent with both the stand design and the overall brand strategy.

A thoughtful selection of colors, materials, and illuminated elements helps the stand stand out in the crowd and remain memorable to visitors. By incorporating modern tools – screens, totems, and interactive panels – we enhance visitor engagement and allow them to actively experience the brand.

With well-planned branding and a functional layout, the stand becomes a complete and effective communication platform, facilitating the establishment of business relationships.

EQUIPMENT

Each stand is complemented with carefully selected elements – from furniture and lighting to multimedia systems and technical facilities. We use only proven solutions that combine aesthetics with functionality. Everything is tailored to the project and the nature of the event, ensuring user comfort and visual consistency.

This way, the stands are not only striking but also fully prepared for the fast-paced demands of trade fairs.

TEAM

Our team operates based on smooth and efficient communication at every stage of stand production. Our specialists work directly with designers and technical coordinators, enabling rapid information flow and immediate response to any changes.

The project manager maintains constant contact with the Client, all team members, and suppliers, ensuring clarity in schedules, budgets, and technical requirements. This communication structure minimizes the risk of errors and delays, helping the team quickly identify issues that need adjustment.

As a result, the entire process – from concept through production and assembly to after-sales service – runs smoothly, maintaining the highest quality standards.

PARTNERSHIP APPROACH

Every project is built on a PARTNERSHIP-BASED RELATIONSHIP and OPEN COMMUNICATION with the Client. From the very first contact, we ensure clear information flow, rapid response, and joint development of solutions.

We focus on fully understanding our partners' needs and business objectives, allowing us to create stands that are tailored not only visually but also strategically.

Through continuous communication and team engagement, we maintain ongoing collaboration – including for subsequent events and trade fair editions.
